

UNITED STATES PATENT APPLICATION

OF

ANDREW GREAVES , NICOLAS DAUBRESSE AND XAVIER RADISSON

FOR

**PROCESS FOR DYEING HUMAN KERATIN MATERIALS, HAVING A
LIGHTENING EFFECT, COMPRISING AT LEAST ONE FLUORESCENT DYE AND
COMPOSITIONS COMPRISING THE SAME**

[001] This application claims benefit of U.S. Provisional Application No. 60/468,103, filed May 6, 2003.

[002] The present disclosure is directed to a process for dyeing human keratin materials having a lightening effect comprising, in a cosmetically acceptable medium, at least one fluorescent dye. The present disclosure also relates to compositions comprising the at least one fluorescent dye.

[003] It is common for individuals to wish to lighten their skin and/or hair and for this purpose to use cosmetic or dermatological compositions containing bleaching agents. The substances most commonly used as bleaching agents are hydroquinone and its derivatives, kojic acid and its derivatives, azelaic acid, arbutin and its derivatives, alone or in combination with other active agents. However, these agents are not without their drawbacks. For example, they need to be used for a long time and in large amounts in order to obtain a bleaching effect on the skin. Moreover, no immediate effect is observed on applying compositions comprising these common bleaching agents.

[004] With regards to hydroquinone and its derivatives, for example, they are known for their cytotoxicity towards melanocytes.

[005] Additionally, kojic acid and its derivatives can have the drawback of being expensive and consequently of not being practically useful in large amount in products for commercial mass distribution.

[006] There is thus still a need for cosmetic compositions that allow a lighter, uniform, homogeneous skin tone of natural appearance to be obtained.

[007] In the field of hair care, to obtain a lighter coloration, a chemical bleaching process is conventionally used. This process consists in bleaching the melanins of keratin fibers with an oxidizing system, generally comprising at least hydrogen peroxide optionally

combined with persalts. This operation may optionally be performed in the presence of direct dyes and/or oxidation dyes.

[008] This bleaching system has the drawback of degrading the fibers and of impairing their cosmetic properties. For example, with bleaching, the hair has a tendency to become coarse, more difficult to disentangle, and more fragile.

[009] It is thus desirable to have available compositions that allow the hair and other human keratin fibers to be lightened while at the same time dyeing them, in an aesthetic manner and without degrading these fibers.

[010] The inventors of the present disclosure propose a process for dyeing human keratin materials having a lightening effect, and also at least one fluorescent compound and compositions comprising the same, which address some of the drawbacks mentioned above.

[011] In at least one embodiment of the present disclosure, a process for dyeing human keratin materials having a lightening effect, comprising applying to the keratin materials, a composition comprising, in a cosmetically acceptable medium, at least one fluorescent compound having the following formula:

wherein:

R_1 and R_2 , which may be identical or different, are chosen from:

- hydrogen atoms;
- linear and branched alkyl radicals comprising 1 to 10 carbon atoms, for example, from 1 to 4 carbon atoms, optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and/or optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;
- aryl and arylalkyl radicals, wherein the aryl groups comprise 6 carbon atoms and the alkyl groups comprise 1 to 4 carbon atoms; the aryl group may optionally be substituted with at least one linear or branched alkyl radical comprising 1 to 4 carbon atoms optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and/or optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;
- R_1 and R_2 may optionally be linked so as to form a heterocycle with the nitrogen atom and may further comprise at least one other hetero atom, wherein the heterocycle may be optionally substituted with at least one linear or branched alkyl radical, for example, comprising 1 to 4 carbon atoms and optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and/or optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;
- R_1 or R_2 may also optionally be engaged in a heterocycle comprising the nitrogen atom to which they are attached and one of the carbon atoms of the

phenyl group bearing the nitrogen atom;

[012] R_3 and R_4 , which may be identical or different, are chosen from hydrogen atoms and alkyl radicals comprising 1 to 4 carbon atoms;

[013] R_5 , which may be identical or different, is chosen from hydrogen atoms, halogen atoms or linear and branched alkyl radicals comprising 1 to 4 carbon atoms, optionally interrupted with at least one hetero atom;

[014] R_6 , which may be identical or different, is chosen from hydrogen atoms; halogen atoms; linear or branched alkyl radicals comprising 1 to 4 carbon atoms, optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom and/or optionally interrupted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;

[015] X is chosen from:

- linear and branched alkyl radicals comprising 1 to 14 carbon atoms and alkenyl radicals comprising 2 to 14 carbon atoms, wherein said alkyl and alkenyl radicals may be optionally interrupted with at least one entity chosen from hetero atoms and groups substituted with at least one hetero atom and/or may be optionally substituted with at least one entity chosen from hetero atoms, groups containing at least one hetero atom, and halogen atoms;
- 5- and 6-membered heterocyclic radicals optionally substituted with at least one entity chosen from

linear and branched alkyl radicals comprising 1 to 14 carbon atoms, optionally substituted with at least one hetero atom;

linear and branched aminoalkyl radicals comprising 1 to 4 carbon atoms,

optionally substituted with at least one hetero atom; and

halogen atoms;

- fused and non-fused aromatic and diaromatic radicals, optionally separated with an alkyl radical comprising 1 to 4 carbon atoms, wherein the aromatic and diaromatic radicals may optionally be substituted with at least one entity chosen from halogen atoms and from alkyl radicals comprising 1 to 10 carbon atoms optionally substituted and/or interrupted with at least one entity chosen from hetero atoms and groups bearing at least one hetero atom
- dicarbonyl radicals;
- the group X optionally comprises at least one cationic charge;

[016] a is equal to 0 or 1;

[017] Y⁻, which may be identical or different, is chosen from organic or mineral anions; and

[018] n is an integer ranging from 2 to the number of cationic charges present in the fluorescent dye.

[019] The present disclosure is also directed to at least one fluorescent or non-fluorescent dye, of the following formula:

wherein:

[020] R_1 and R_2 , which may be identical or different, are chosen from:

- hydrogen atoms;
- linear and branched alkyl radicals comprising 1 to 10 carbon atoms, for example, from 1 to 4 carbon atoms, optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least hetero atom and optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom and halogen atoms;
- aryl and arylalkyl radicals, wherein the aryl groups comprise 6 carbon atoms and the alkyl groups comprise 1 to 4 carbon atoms; the aryl groups may optionally be substituted with at least one entity chosen from linear and branched alkyl radicals comprising 1 to 4 carbon atoms optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and optionally substituted with at least entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;
- R_1 and R_2 may optionally be linked so as to form a heterocycle with the

nitrogen atom to which they are attached and may further comprise at least one other hetero atom, wherein the heterocycle is optionally substituted with at least one linear or branched alkyl radical, for example, comprising 1 to 4 carbon atoms, said alkyl radical being optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and being optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;

- R_1 or R_2 may also optionally be engaged in a heterocycle comprising the nitrogen atom to which they are attached and one of the carbon atoms of the phenyl group bearing the said nitrogen atom;

[021] R_3 and R_4 , which may be identical or different, are chosen from hydrogen atoms and alkyl radicals comprising 1 to 4 carbon atoms;

[022] R_5 , which may be identical or different, is chosen from hydrogen atoms, halogen atoms, and linear or branched alkyl radicals comprising 1 to 4 carbon atoms, optionally interrupted with at least one hetero atom;

[023] R_6 , which may be identical or different, is chosen from hydrogen atoms; halogen atoms; linear and branched alkyl radicals comprising 1 to 4 carbon atoms, optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and optionally substituted with at least one entity chosen from hetero atoms, and groups comprising at least one hetero atom and halogen atom;

X is chosen from:

- linear and branched alkyl radicals comprising 1 to 14 carbon atoms or alkenyl

radicals comprising 2 to 14 carbon atoms, said alkyl and alkenyl radicals optionally being interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and optionally being substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;

- 5- and 6-membered heterocyclic radicals optionally substituted with at least one entity chosen from

linear or branched alkyl radicals comprising 1 to 14 carbon atoms, optionally substituted with at least one hetero atom;

linear or branched aminoalkyl radicals comprising 1 to 4 carbon atoms, optionally substituted with at least one hetero atom; and

halogen atoms;

- fused and non-fused aromatic or diaromatic radicals, optionally separated with at least one alkyl radical comprising 1 to 4 carbon atoms, the aromatic and diaromatic radicals may optionally be substituted with at least one entity chosen from halogen atoms and alkyl radicals comprising 1 to 10 carbon atoms optionally substituted and/or interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom
- dicarbonyl radicals;
- the group X optionally comprising at least one cationic charge;

[024] a is equal to 0 or 1;

[025] Y⁻, which may be identical or different, is chosen from organic and mineral anions;

[026] n is an integer ranging from 2 to the number of cationic charges present in the fluorescent compound;

[027] with the exception of the compounds for which:

- X is chosen from unsubstituted linear alkyl radicals comprising 1 or 4 carbon atoms wherein a is equal to 1 or a is equal to 0; and R₁ and R₂ simultaneously comprise methyl radicals; R₅ and R₆ comprise hydrogen atoms; R₃ and R₄, which are identical, comprise hydrogen atoms;
- X is chosen from ethyl, linear and branched unsubstituted C₃ alkyl radicals; a is equal to 1; R₃ and R₄, which are identical, are hydrogen atoms; R₅ is a hydrogen atom; R₁ and R₂:
 - are identical, and are chosen from methyl radicals, and R₆ is chosen from hydrogen atoms and methyl radicals in an ortho position relative to the carbon atom of the benzene ring bearing the carbon-carbon unsaturated bond;
 - and are identical, comprise ethyl radicals,
 - and R₆ is chosen from hydrogen atoms and methoxy radicals in an ortho position relative to the carbon atom of the benzene ring bearing the carbon-carbon unsaturated bond; or
 - are different, and are chosen from ethyl radicals and ethyl radicals substituted with an entity chosen from dimethylamino, trimethylammonium and benzyldimethylammonium groups;
- X is chosen from phenyl radicals linked to the groups CR₃R₄ via bonds in the 1,4 position relative to each other; R₃ and R₄, which are identical, comprise hydrogen atoms; a is equal to 1; R₅ comprises a hydrogen atom; R₁ and R₂:

- are identical, and are methyl radicals, and R_6 is chosen from hydrogen atoms and methyl radicals in an ortho position relative to the carbon atom of the benzene ring bearing the carbon-carbon unsaturated bond;
- are identical, comprise ethyl radicals, and R_6 is chosen from hydrogen atoms or methoxy radicals in an ortho position relative to the carbon atom of the benzene ring bearing the carbon-carbon unsaturated bond; or
- are different, and are chosen from ethyl radicals and ethyl radicals substituted with an entity chosen from dimethylamino, trimethylammonium and benzyldimethylammonium groups.

[028] Further, another embodiment of the disclosure is directed to a multi-compartment kit, comprising at least one compartment containing a composition comprising at least one fluorescent dye or non-fluorescent dye as disclosed herein and optionally at least one entity chosen from direct dyes, oxidation bases, and/ couplers, in a cosmetically acceptable medium, and at least one other compartment containing a composition comprising at least one oxidizing agent.

[029] The present disclosure allows for dyeing, while at the same time lightening, human keratin materials without impairing them. In contrast, many of the standard processes in which it is desired to dye keratin materials while at the same time lightening them use compounds that can in the long run cause damage to the keratin materials (kojic acid, hydroquinone and oxidizing agent).

[030] For example, the process according to the present disclosure makes it possible to obtain a coloration or a shade for which the reflectance of the materials treated

in accordance with the invention, measured ranging from about 550 to about 700 nm, is greater than the reflectance of the untreated materials.

[031] The present disclosure provides a lighter coloration than the natural coloration, with a satisfactory aesthetic effect.

[032] Finally, in the case of compositions applied to keratin fibers, such as, for example, the hair, the disclosed compounds may possess good dyeing affinity for these fibers, and good fastness properties with respect to external agents.

[033] However, other characteristics and advantages of the present disclosure will emerge more clearly on reading the description, the examples and the attached figure representing the reflectance as a function of the wavelength for hair treated with the composition according to the disclosure and for untreated hair.

[034] Unless otherwise indicated, the limits of the ranges of values that are given in the description are included in these ranges.

[035] First, the keratin materials treated in accordance with the disclosed process according to the disclosure are of human origin. In the text herein below, mention will be made to keratin materials, it being understood that they are human keratin materials. In addition, they may or may not be in the form of fibers. Thus, the keratin materials may be, for example, the skin, the hair, the eyelashes, the eyebrows, the beard or the moustache.

[036] According to at least one aspect of the disclosure, the treated keratin material is the skin. For example, the skin has a lightness L^* in the C.I.E. $L^*a^*b^*$ system, measured using a Minolta CM2002 colorimeter, of less than or equal to 55. It is recalled that a value of 0 for L^* is equivalent to black and 100 is equivalent to white.

[037] Non-limiting examples of the skin types corresponding to this lightness are asiatic skin, african skin, afro-american skin, hispano-american skin, indian skin and north-african skin.

[038] According to a further embodiment of the disclosure, the treated keratin materials are in the form of fibers, and for example, of artificially pigmented fibers or artificially colored fibers. These fibers are, for example, the hair.

[039] The artificially pigmented or colored hair has a tone height of less than or equal to 6 (dark blond) and, for example, less than or equal to 4 (chestnut).

[040] The notion of "tone" is based on the classification of the natural shades, one tone separating each shade from the one immediately following or preceding it. This definition and the classification of the natural shades are well known to hairstyling professionals and are published in the book "Sciences des traitements capillaires [Hair treatment sciences]" by Charles Zviak, 1988, published by Masson, pp. 215 and 278.

[041] As has been mentioned previously, the process according to the disclosure comprises applying a composition comprising at least one fluorescent dye.

[042] For the purpose of clarity of the description, the composition and its various ingredients will first be described.

[043] The at least one fluorescent dye present in the composition corresponds to the following general formula:

In this formula, R_1 and R_2 , which may be identical or different, are chosen from:

- hydrogen atoms;
- linear and branched alkyl radicals comprising 1 to 10 carbon atoms and for example, from 1 to 4 carbon atoms, optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;
- aryl and arylalkyl radicals, wherein the aryl groups comprise 6 carbon atoms and the alkyl groups comprise 1 to 4 carbon atoms; the aryl groups may optionally be substituted with at least one linear or branched alkyl radical comprising 1 to 4 carbon atoms optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;
- R_1 and R_2 may also be optionally linked to form a heterocycle with the nitrogen atom and may comprise at least one hetero atom, the heterocycle optionally being substituted with at least one radical chosen from linear or

branched alkyl radicals, for example, comprising 1 to 4 carbon atoms, and optionally being interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;

- R_1 or R_2 may also optionally be included in a heterocycle comprising the nitrogen atom and one of the carbon atoms of the phenyl group comprising the said nitrogen atom.

[044] As used herein, the term "hetero atom" means oxygen and nitrogen atoms.

[045] Among the groups comprising such atoms that may be used, non-limiting mention may be made of, among others, hydroxyl, alkoxy, carbonyl, amino, ammonium, amido, i.e., -N-CO- and carboxyl, i.e., -O-CO- or -CO-O- groups.

[046] With regard to the alkenyl groups, these groups comprise at least one unsaturated carbon-carbon bonds (e.g., -C=C-) and for example, only one carbon-carbon double bond.

[047] In this general formula, R_1 and R_2 , which may be identical or different, for example, are chosen from:

- hydrogen atoms;
- alkyl radicals comprising 1 to 10 carbon atoms, for example, 1 to 6 carbon atoms, further for example, 1 to 4 carbon atoms, optionally interrupted with an oxygen atom or optionally substituted with at least one entity chosen from hydroxyl, amino or ammonium radicals and chlorine and fluorine atoms;
- benzyl and phenyl radicals optionally substituted with a radical chosen from alkyl and alkoxy radicals comprising 1 to 4 carbon atoms, for example, 1 or 2

carbon atoms;

- nitrogen atoms, heterocyclic radicals chosen from pyrrolo, pyrrolidino, imidazolino, imidazolo, imidazolium, pyrazolino, piperazino, morpholino, morpholo, pyrazolo and triazoloradicals, optionally substituted with at least one linear or branched alkyl radical comprising 1 to 4 carbon atoms and optionally interrupted and/or optionally substituted with an entity chosen from nitrogen and oxygen atoms, and groups comprising nitrogen and oxygen atoms.

[048] With regard to the abovementioned amino or ammonium radicals, the radicals borne by the nitrogen atom may be identical or different and may, for example, be chosen from hydrogen atoms, C₁-C₁₀ alkyl radicals, for example, C₁-C₄ alkyl radicals and arylalkyl radicals wherein, for example, the aryl radical contains 6 carbon atoms and the alkyl radical contains from 1 to 10 carbon atoms, and for example, 1 to 4 carbon atoms.

[049] According to still another aspect of the present disclosure, the radicals R₁ and R₂, which may be identical or different are chosen from hydrogen atoms; linear and branched C₁-C₆ alkyl radicals; C₂-C₆ alkyl radicals substituted with a hydroxyl radical; C₂-C₆ alkyl radicals comprising an amino or ammonium group; C₂-C₆ chloroalkyl radicals; C₂-C₆ alkyl radicals interrupted with an entity chosen from oxygen atoms and groups comprising oxygen atoms (for example esters); aromatic radicals, such as, phenyl, benzyl or 4-methylphenyl; and heterocyclic radicals, such as, pyrrolo, pyrrolidino, imidazolo, imidazolino, imidazolium, piperazino, morpholo, morpholino, pyrazolo and triazolo radicals, optionally substituted with at least one C₁-C₆ alkyl or aromatic radical.

[050] For example, R₁ and R₂, which may be identical or different, are chosen from hydrogen atoms, linear and branched C₁-C₆ alkyl radicals, such as methyl, ethyl, n-butyl or

n-propyl radicals; 2-hydroxyethyl; alkyltrimethylammonium or alkyltriethylammonium radicals, the alkyl radical being a linear C₂-C₆ alkyl radical; (di)alkylmethylamino and (di)alkylethylamino radicals, the alkyl radical being a linear C₁-C₆ alkyl radical; -CH₂CH₂Cl; -(CH₂)_n-OCH₃ and -(CH₂)_n-OCH₂CH₃ wherein n is an integer ranging from 2 to 6; -CH₂CH₂-OCOCH₃; and -CH₂CH₂COOCH₃.

[051] Further, R₁ and R₂, which may or may not be identical, are identical, and are chosen from methyl radicals and ethyl radicals.

[052] R₁ and R₂, which may be identical or different, may also be chosen from heterocyclic radicals of the pyrrolidino, 3-aminopyrrolidino, 3-(dimethyl)aminopyrrolidino, 3-(trimethyl)aminopyrrolidino, 2,5-dimethylpyrrolo, 1H-imidazo, 4-methylpiperazino, 4-benzylpiperazino, morpholo, 3,5-(tert-butyl)-1H-pyrazolo, 1H-pyrazolo and 1H-1,2,4-triazolo radicals.

[053] R₁ and R₂, which may be identical or different, may also be chosen from and may be linked to form a heterocycle of formula (I) and (II) below:

wherein R' is chosen from hydrogen atoms, C₁-C₃ alkyl radicals, -CH₂CH₂OH, and -CH₂CH₂OCH₃.

[054] In accordance with yet another aspect of the disclosure, R₅, which may be identical or different, is chosen from hydrogen atoms, fluorine and chlorine atoms, and linear and branched alkyl radicals, comprising 1 to 4 carbon atoms optionally interrupted with an entity chosen from oxygen and nitrogen atoms.

[055] R_5 , if it is other than hydrogen, may be, for example, in position(s) 3 and/or 5 relative to the carbon of the ring bearing the nitrogen substituted with the radicals R_1 and R_2 , and for example, may be in position 3 relative to that carbon.

[056] For further example, R_5 , which may be identical or different, comprises hydrogen atoms; linear and branched C_1 - C_4 alkyl radicals; $-O-R_{51}$ wherein R_{51} comprises linear C_1 - C_4 alkyl radicals; $-R_{52}-O-CH_3$ wherein R_{52} comprises linear C_2 - C_3 alkyl radicals; $-R_{53}-N(R_{54})_2$ wherein R_{53} comprises linear C_2 - C_3 alkyl radicals and R_{54} , which may be identical or different, is chosen from hydrogen atoms and methyl radicals.

[057] For example, R_5 , which may be identical or different, is chosen from hydrogen, methyl and methoxy, and R_5 , in further example, is a hydrogen atom.

[058] According to another aspect, R_6 , which may be identical or different, is chosen from hydrogen atoms; linear and branched C_1 - C_4 alkyl radicals; $-X$ wherein X comprises chlorine, bromine and fluorine atoms; $-R_{61}-O-R_{62}$ wherein R_{61} comprises linear C_2 - C_3 alkyl radicals and R_{62} comprises methyl radicals; $-R_{63}-N(R_{64})_2$ wherein R_{63} comprises linear C_2 - C_3 alkyl radicals and R_{64} , which may be identical or different, is chosen from hydrogen atoms and methyl radicals; $-N(R_{65})_2$ wherein R_{65} , which may be identical or different, is chosen from hydrogen atoms and linear C_2 - C_3 alkyl radicals; $-NHCOR_{66}$ wherein R_{66} is chosen from C_1 - C_2 alkyl radicals, C_1 - C_2 chloroalkyl radicals, radicals $-R_{67}-NH_2$, $-R_{67}-NH(CH_3)$, $-R_{67}N(CH_3)_2$, $-R_{67}-N^+(CH_3)_3$, and $-R_{67}-N^+(CH_2CH_3)_3$ wherein R_{67} comprises C_1 - C_2 alkyl radicals.

[059] R_6 , if it is other than hydrogen, is, for example, in position 2 and/or 4 relative to the nitrogen atom of the pyridinium ring, and further for example, in position 4 relative to that nitrogen atom.

[060] As such, R₆, which may be identical or different, is chosen from hydrogen atoms and methyl or ethyl radicals, and R₆, for example, comprises a hydrogen atom.

[061] With regard to R₃ and R₄, these radicals, which may be identical or different, are chosen, for example, from hydrogen atoms and alkyl radicals comprising 1 to 4 carbon atoms, and for example, methyl radicals. In further examples, R₃ and R₄ are each hydrogen atoms.

[062] As mentioned above, X is chosen from:

- linear or branched alkyl radicals comprising 1 to 14 carbon atoms and alkenyl radicals comprising 2 to 14 carbon atoms, said alkyl and alkenyl radicals being optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and being optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;
- 5- and 6-membered heterocyclic radicals, optionally substituted with at least one entity chosen from
 - linear and branched alkyl radicals comprising 1 to 14 carbon atoms;
 - linear and branched aminoalkyl radicals comprising 1 to 4 carbon atoms, optionally substituted with at least one hetero atom; and
 - halogen atoms;
- fused and non-fused aromatic and diaromatic radicals, optionally interrupted with an alkyl radical comprising 1 to 4 carbon atoms, wherein the aromatic and diaromatic radicals may optionally be substituted with at least one entity chosen from halogen atoms and alkyl radicals comprising 1 to 10 carbon atoms, wherein the alkyl radical may optionally be interrupted with at least

one hetero atom and substituted with at least one entity chosen from hetero atoms and groups bearing at least one hetero atom;

- dicarbonyl radicals.

[063] In addition, the group X optionally comprises at least one cationic charge.

[064] Thus, X may be chosen from linear and branched alkyl radicals comprising 1 to 14 carbon atoms, and alkenyl radicals comprising 2 to 14 carbon atoms, and wherein X may be optionally interrupted with at least one hetero atom chosen from oxygen and nitrogen atoms, and may be optionally substituted with at least one entity chosen from hetero atoms chosen from oxygen and nitrogen atoms, groups comprising at least one hetero atom, and halogens chosen from fluorine and chlorine atoms.

[065] Among the groups of this type, non-limiting mention may be made, for example, of hydroxyl, alkoxy (for instance, with a radical R of the C₁-C₄ alkyl type), amino, ammonium, amido, carbonyl and carboxyl groups, i.e., -COO- or -O-CO-, such as, with a radical of alkyloxy type.

[066] The nitrogen atom, if present, may be in a quaternized or non-quaternized form. When a nitrogen atom is present, the at least one other radical borne by the quaternized or non-quaternized nitrogen atom may be identical or different, and may be chosen from hydrogen atoms and C₁-C₄ alkyl radicals, such as, methyl.

[067] According to yet another aspect of the present disclosure, the group X may comprise at least one chosen from 5- and 6-membered heterocyclic radicals chosen from imidazolo, pyrazolo, triazino and pyridino radicals, which may be optionally substituted with at least one entity chosen from linear and branched alkyl radicals comprising 1 to 14 carbon atoms, for instance, from 1 to 10 carbon atoms, and such as, from 1 to 4 carbon atoms; and linear and branched aminoalkyl radicals comprising 1 to 10 carbon atoms, for

example, from 1 to 4 carbon atoms, optionally substituted with an entity chosen from groups comprising at least one hetero atom, such as, hydroxyl radicals, and halogen atoms. The amino group may be linked to the heterocycle.

[068] In accordance with another aspect of the present disclosure, X may be chosen from aromatic radicals, for example, containing 6 carbon atoms, or fused or non-fused diaromatic radicals, for example, comprising 10 to 12 carbon atoms, optionally separated with an alkyl radical comprising 1 to 4 carbon atoms, wherein the diaromatic radicals may optionally be substituted with at least one entity chosen from halogen atoms and alkyl radicals comprising 1 to 10 carbon atoms, such as from 1 to 4 carbon atoms, wherein the alkyl radicals may optionally be interrupted with at least one entity chosen from oxygen and nitrogen atoms, and groups comprising at least one hetero atom, for instance, carbonyl, carboxyl, amido, amino, and ammonium radicals.

[069] The aromatic radical, for example, a phenyl radical, may be linked to the groups CR_3R_4 via bonds in positions 1,2; 1,3 and 1,4, for example, in positions 1,3 and 1,4. If the phenyl radical linked via bonds in positions 1,4 bears one or two substituents, the at least one substituent may be located in position 1,4 relative to one of the groups CR_3R_4 . If the phenyl radical linked via bonds in positions 1,3 bears one or two substituents, this or these substituent(s) are preferably located in position 1 and/or 3 relative to one of the groups CR_3R_4 .

[070] In the case where X is diaromatic, it, may be, for example, non-fused and comprises two phenyl radicals optionally separated with an entity chosen from single bonds, i.e., a carbon of each of the two rings and alkyl radicals, for example, CH_2 and $C(CH_3)_2$ type. According to one embodiment, the aromatic radicals do not have to bear a

substituent. It should be noted that the diaromatic radical may be linked to the groups CR_3R_4 via bonds in positions 4,4'.

[071] As examples of the groups from which X may be chosen, non-limiting mention may be made of, for example, linear and branched alkyl radicals comprising 1 to 13 carbon atoms, such as methylene, ethylene, propylene, isopropylene, n-butylene, pentylene and hexylene; 2-hydroxypropylene and 2-hydroxy-n-butylene; C_1 - C_{13} alkylene radicals interrupted with at least one hetero atom chosen from nitrogen and oxygen atoms, and optionally substituted with at least one entity chosen from nitrogen atoms, oxygen atoms, and groups bearing at least one hetero atom, for instance, hydroxyl, amino, ammonium, carbonyl and carboxyl groups, for example, $-CH_2CH_2OCH_2CH_2-$, 1,6-dideoxy-d-mannitol, $-CH_2N^+(CH_3)_2CH_2-$, $-CH_2CH_2N^+(CH_3)_2-(CH_2)_6N^+(CH_3)_2-CH_2CH_2-$, $CO-CO-$, 3,3-dimethylpentylene, 2-acetoxyethylene, butylene-1,2,3,4-tetraol; $-CH=CH-$; aromatic and diaromatic radicals substituted with at least one entity chosen from halogen atoms, and alkyl radicals, with at least one group comprising at least one hetero atom, such as 1,4-phenylene, 1,3-phenylene, 1,2-phenylene, 2,6-fluorobenzene, 4,4'-biphenylene, 1,3-(5-methylbenzene), 1,2-bis(2-methoxy)benzene, bis(4-phenyl)methane, methyl 3,4-benzoate and 1,4-bis(amidomethyl)phenyl; heterocyclic radicals, for example, pyridine, and derivatives thereof, including 2,6-bispyridine, imidazole, imidazolium and triazine.

[072] According to still another aspect of the present disclosure, X may be chosen from linear and branched C_1 - C_{13} alkyl radicals; $-CH_2CH(OH)CH_2-$; $-CH_2CH(Cl)CH_2-$; $-CH_2CH_2-OCOCH_2-$; $-CH_2CH_2COOCH_2-$; $-Ra-O-Rb-$ wherein Ra is chosen from linear C_2 - C_6 alkyl radicals and Rb is chosen from linear C_1 - C_2 alkyl radicals; $-Rc-N(Rd)-Re-$ wherein Rc is chosen from C_2 - C_9 alkyl radicals, Rd is chosen from hydrogen atoms and C_1 - C_2 alkyl radicals and Re is chosen from C_1 - C_6 alkyl radicals; $-Rf-N^+(Rg)_2-Rh-$ wherein Rf is chosen

from linear C₂-C₉ alkyl radicals, R_g, which are, for example, identical, are chosen from C₁-C₂ alkyl radicals and R_h is chosen from linear C₁-C₆ alkyl radicals; and -CO-CO-.

[073] X may comprise an imidazole radical, optionally substituted with at least one alkyl radical comprising 1 to 14 carbon atoms, such as, from 1 to 10 carbon atoms, still further, from 1 to 4, and for example, the divalent radicals of formula (III);

wherein R_i and R_j, which may be identical or different, are chosen from linear C₁-C₆ alkyl radicals;

[074] X may also be chosen from the divalent triazine-based radicals of the following formula below:

[075] According to another aspect of the present disclosure, X may be chosen from the divalent aromatic radicals below:

[076] In the general formula of the fluorescent compounds described herein, Y⁻ represents an organic or mineral anion. If there are several anions Y⁻, these anions may be identical or different.

[077] Among the anions of mineral origin that may be mentioned, without limited, are anions derived from halogen atoms, such as chlorides, iodides, sulphates, bisulphates,

nitrates, phosphates, hydrogen phosphates, dihydrogen phosphates, carbonates and bicarbonates.

[078] Among the anions of organic origin that may be used, non-limiting mention may be made of anions derived from the salts of saturated or unsaturated, aromatic or non-aromatic monocarboxylic or polycarboxylic, sulphonic or sulphuric acids, optionally substituted with at least one entity chosen from halogen atoms, and hydroxyl and amino radicals. Non-limiting examples of organic anions include acetates, hydroxyacetates, aminoacetates, (tri)chloroacetates, benzoxyacetates, propionates and derivatives bearing a chlorine atom, fumarates, oxalates, acrylates, malonates, succinates, lactates, tartrates, glycolates, citrates, benzoates and derivatives comprising a methyl or amino radical, alkyl sulphates, tosylates, benzenesulphonates, and toluenesulphonates.

[079] For example, the at least one anion Y, which may be identical or different, may be chosen from chloride, sulphate, methosulphate, and ethosulphate.

[080] As discussed above, the integer n ranges from 2 and to the number of cationic charges present in the fluorescent dye.

[081] For example, the fluorescent dyes according to the present disclosure may be symmetrical compounds.

[082] These fluorescent compounds may be synthesized by reacting, in a first step, α -picoline with a reagent comprising two leaving groups that may be chosen from halogen atoms, such as bromine, chlorine, tolylsulphonyl radicals and methanesulphonyl radicals.

[083] This first step may optionally take place in the presence of a solvent, for instance dimethylformamide.

[084] The number of moles of α -picoline is generally 2 per mole of reagent comprising the leaving groups.

[085] In addition, the reaction is usually performed at the reflux temperature of the reagent and/or of the solvent, if a solvent is present.

[086] The product derived from this first step may then be placed in contact with a corresponding aldehyde having the following formula:

wherein R_1 , R_2 and R_6 have the same meanings as disclosed herein above.

[087] The reaction may be performed in the presence of a suitable solvent, which may be, for example, at reflux.

[088] It is also possible to use an aldehyde for which R_1 , R_2 , and R_6 comprise hydrogen atoms. Then one may perform, in accordance with standard methods, the substitution of these hydrogen atoms with suitable radicals as described in the general formula once the second step is complete.

[089] Reference may be made especially to syntheses as described in U.S. Patent No. 4, 256, 458.

[090] It should be noted that, in U.S. Patent No. 4,256,458, the compounds are not described as being applicable to the dyeing of human keratin materials, and even less so to dyeing with a lightening effect without the need to use a specific oxidizing compound. All the compounds described in U.S. Patent No. 4,256,458 are applied for dyeing in the paper industry. .

[091] The fluorescent dyes described herein are dyes that absorb light in the visible part of the spectrum and possibly in the ultraviolet region, and may re-emit a fluorescent

light in the visible portion of the spectrum, with a longer wavelength than that of the absorbed light. The wavelength of the re-emitted light ranges from 500 to 650 nm.

[092] In accordance with the present disclosure, the at least one fluorescent dye may be in a form that is soluble or insoluble in the medium of the composition, at room temperature ranging from 15° to 25°C.

[093] For example, the at least one fluorescent dye is chosen from dyes that are soluble in the medium of the composition.

[094] According to another aspect of the process of the disclosure, the solubility of the fluorescent dye in the medium of the composition is at least 0.001 g/l, , for example, at least 0.5 g/l, for further example, at least 1 g/l, and further at least 5 g/l, at a temperature ranging from 15° to 25°C.

[095] The fluorescent dyes of the present disclosure may be used with additional fluorescent compounds that are soluble in the medium.

[096] As examples of a family of compounds that may be used, non-limiting mention may be made of the fluorescent dyes chosen from the following families: naphthalimides; cationic or non-cationic coumarins; xanthenodiquinolizines such as, sulphorhodamines; azaxanthenes; naphtholactams; azlactones; oxazines; thiazines; dioxazines, pyrenes, and nitrobenzoxadiazoles.

[097] Further examples that may be mentioned comprise:

- the compounds having the following structure:

wherein formula R is chosen from methyl and ethyl radicals; R' is chosen from methyl radicals and X⁻ is chosen from anions, such as, iodide, sulphate and methosulphate.

[098] An example of a compound of this formula that may be used, includes the Photosensitizing Dye NK-557 sold by the company Ubichem, wherein R is ethyl radical, R' is a methyl radical and X⁻ is an iodide.

- Brilliant Yellow B6GL sold by the company Sandoz and having the following structure:

- Basic Yellow 2, or Auramine O, sold by the companies Prolabo, Aldrich or Carlo Erba and having the following structure:

4,4'-(imidocarbonyl)bis(N,N-dimethylaniline) monohydrochloride - CAS number 2465-27-2.

[099] Moreover, the disclosed compounds herein may also be used with additional fluorescent compounds that are insoluble in the medium, among which non-limiting mention may be made of compounds based on zinc oxide or zinc sulphide, and also organic fluorescent compounds manufactured from fluorescent dyes that are predissolved in a support resin so as to obtain a solid that is then ground.

[0100] According to yet another aspect of the present disclosure, the amount of fluorescent compound is present in an amount ranging from 0.01% to 20% by weight

relative to the total weight of the composition, for example from 0.05% to 10% by weight relative to this reference, further for example, from 0.1% to 5% by weight relative to the total weight of the composition.

[0101] With regard to the amount of the at least one additional fluorescent compound, if present, from the at least one additional fluorescent compound is in an amount ranging from 0.05% to 10% by weight relative to the total weight of the composition, for example, from 0.1% to 5% by weight relative to the same reference.

[0102] The cosmetically acceptable medium generally comprises at least water or a mixture of water and of at least one organic solvent.

[0103] Examples of the at least one organic solvent that may be used include at least one solvent chosen from linear or branched alkanols, comprising 1 to 4 carbon atoms, such as, ethanol or isopropanol; polyols and polyol ethers, such as, glycerol, 2-butoxyethanol, propylene glycol, propylene glycol monomethyl ether or monoethyl ether, diethylene glycol monomethyl ether; dimethoxyethane; aromatic alcohols, such as, benzyl alcohol or phenoxyethanol, ketones comprising 3 to 4 carbon atoms, and C₁-C₄ alkyl acetates.

[0104] By way of example, the solvent, if present, is in an amount ranging from 1% to 40% by weight relative to the total weight of the composition, and for example, ranging from 5% to 30% by weight relative to the same reference.

[0105] The pH of the composition employed in the process according to the present disclosure ranges from 3 to 12, and for example, ranges from 5 to 11.

[0106] The pH may be adjusted to the desired value by means of acidifying or basifying agents normally used.

[0107] Examples of acidifying agents that may be used include mineral or organic acids, chosen from, for instance, hydrochloric acid; orthophosphoric acid; sulphuric acid; carboxylic acids; for example, acetic acid, tartaric acid, citric acid and lactic acid; and sulphonic acids.

[0108] Examples of basifying agents that may be used, non-limiting mention may be made, are aqueous ammonia, alkaline carbonates, alkanolamines such as monoethanolamine, diethanolamine and triethanolamine and derivatives thereof, sodium hydroxide, potassium hydroxide and the compounds of formula (A) below:

wherein W may be a propylene residue optionally substituted with an entity chosen from hydroxyl groups and C₁-C₆ alkyl radicals; R₁, R₂, R₃ and R₄, which may be identical or different, are chosen from hydrogen atoms and C₁-C₆ alkyl radicals optionally comprising at least one hydroxyl radical.

[0109] The disclosed composition may also comprise at least one direct non-fluorescent dye.

[0110] For example, the at least one direct non-fluorescent dye can be chosen from nonionic, cationic and anionic dyes.

[0111] This at least one direct dye is chosen from nitrobenzene dyes, azo dyes, azomethine dyes, methine dyes, anthraquinone dyes, naphthoquinone dyes, benzoquinone dyes, phenothiazine dyes, indigoid dyes, xanthene dyes, phenanthridine dyes, phthalocyanin dyes and triarylmethane-based dyes.

[0112] The following, non-limiting examples, of red or orange nitrobenzene dyes may be chosen from:

- 1-hydroxy-3-nitro-4-N-(γ -hydroxypropyl)aminobenzene,
- N-(β -hydroxyethyl)amino-3-nitro-4-aminobenzene,
- 1-amino-3-methyl-4-N-(β -hydroxyethyl)amino-6-nitrobenzene,
- 1-hydroxy-3-nitro-4-N-(β -hydroxyethyl)aminobenzene,
- 1,4-diamino-2-nitrobenzene,
- 1-amino-2-nitro-4-methylaminobenzene,
- N-(β -hydroxyethyl)-2-nitro-para-phenylenediamine,
- 1-amino-2-nitro-4-(β -hydroxyethyl)amino-5-chlorobenzene,
- 2-nitro-4-aminodiphenylamine,
- 1-amino-3-nitro-6-hydroxybenzene,
- 1-(β -aminoethyl)amino-2-nitro-4-(β -hydroxyethyloxy)benzene,
- 1-(β,γ -dihydroxypropyl)oxy-3-nitro-4-(β -hydroxyethyl)aminobenzene,
- 1-hydroxy-3-nitro-4-aminobenzene,
- 1-hydroxy-2-amino-4,6-dinitrobenzene,
- 1-methoxy-3-nitro-4-(β -hydroxyethyl)aminobenzene,
- 2-nitro-4'-hydroxydiphenylamine and
- 1-amino-2-nitro-4-hydroxy-5-methylbenzene.

[0113] In addition to and/or replacing the red or orange nitrobenzene dyes, one or more additional direct dyes may be chosen from yellow, green-yellow, blue or violet nitrobenzene dyes, azo dyes, anthraquinone dyes, naphthoquinone dyes, benzoquinone dyes, indigoid dyes, and triarylmethane-based dyes.

[0114] These additional direct dyes may, for example, be basic dyes, among which non-limiting mention may be made to the dyes known in the Colour Index, 3rd edition, under the names "Basic Brown 16", "Basic Brown 17", "Basic Yellow 57", "Basic Red 76", "Basic Violet 10", "Basic Blue 26" and "Basic Blue 99", or acidic direct dyes, among which non-limiting mention may be made, for example, to the dyes known in the Colour Index, 3rd edition, under the names "Acid Orange 7", "Acid Orange 24", "Acid Yellow 36", "Acid Red 33", "Acid Red 184", "Acid Black 2", "Acid Violet 43" and "Acid Blue 62", or alternatively cationic direct dyes such as those described in patent applications WO 95/01772, WO 95/15144 and EP 714 954, the entire disclosure and subject matter of which is incorporated herein by reference.

[0115] The additional yellow and green-yellow nitrobenzene direct dyes that may be used include, for example, are the compounds chosen from:

- 1- β -hydroxyethyloxy-3-methylamino-4-nitrobenzene,
- 1-methylamino-2-nitro-5-(β,γ -dihydroxypropyl)oxybenzene,
- 1-(β -hydroxyethyl)amino-2-methoxy-4-nitrobenzene,
- 1-(β -aminoethyl)amino-2-nitro-5-methoxybenzene,
- 1,3-di(β -hydroxyethyl)amino-4-nitro-6-chlorobenzene,
- 1-amino-2-nitro-6-methylbenzene,
- 1-(β -hydroxyethyl)amino-2-hydroxy-4-nitrobenzene,
- N-(β -hydroxyethyl)-2-nitro-4-trifluoromethylaniline,
- 4-(β -hydroxyethyl)amino-3-nitrobenzenesulphonic acid,
- 4-ethylamino-3-nitrobenzoic acid,
- 4-(β -hydroxyethyl)amino-3-nitrochlorobenzene,

- 4-(β -hydroxyethyl)amino-3-nitromethylbenzene,
- 4-(β,γ -dihydroxypropyl)amino-3-nitrotrifluoromethylbenzene,
- 1-(β -ureidoethyl)amino-4-nitrobenzene,
- 1,3-diamino-4-nitrobenzene,
- 1-hydroxy-2-amino-5-nitrobenzene,
- 1-amino-2-[tris(hydroxymethyl)methyl]amino-5-nitrobenzene,
- 1-(β -hydroxyethyl)amino-2-nitrobenzene and
- 4-(β -hydroxyethyl)amino-3-nitrobenzamide.

[0116] The additional blue or violet nitrobenzene direct dyes that may be used include, for example, compounds chosen from:

- 1-(β -hydroxyethyl)amino-4-N,N-bis(β -hydroxyethyl)amino-2-nitrobenzene,
- 1-(γ -hydroxypropyl)amino-4,N,N-bis(β -hydroxyethyl)amino-2-nitrobenzene,
- 1-(β -hydroxyethyl)amino-4-(N-methyl-N- β -hydroxyethyl)amino-2-nitrobenzene,
- 1-(β -hydroxyethyl)amino-4-(N-ethyl-N- β -hydroxyethyl)amino-2-nitrobenzene,
- 1-(β,γ -dihydroxypropyl)amino-4-(N-ethyl-N- β -hydroxyethyl)amino-2-nitrobenzene,
- 2-nitroparaphenylenediamines having the following formula:

wherein:

- R_6 is chosen from C_1 - C_4 alkyl, β -hydroxyethyl, β -hydroxypropyl, and γ -hydroxypropyl radicals;

- R₅ and R₇, which may be identical or different, are chosen from β -hydroxyethyl, β -hydroxypropyl, γ -hydroxypropyl and β,γ -dihydroxypropyl radicals, at least one of the radicals R₆, R₇ or R₅ are chosen from γ -hydroxypropyl radicals and R₆ and R₇ not simultaneously being able to denote a β -hydroxyethyl radical when R₆ is a γ -hydroxypropyl radical, such as those described in French patent FR 2 692 572.

[0117] When present, the at least one direct non-fluorescent dye is present in an amount ranging from 0.0005% to 12% by weight, relative to the total weight of the composition, and for example, ranging from 0.005% to 6% by weight, relative to the total weight of the composition.

[0118] In the case where the composition is employed for dyeing keratin fibers, such as the hair, with a lightening effect, the disclosed composition may still furthermore comprise at least one oxidation base.

[0119] The oxidation base may be chosen from the oxidation bases conventionally used for oxidation dyeing, such as, para-phenylenediamines, bis(phenyl)alkylenediamines, para-aminophenols, ortho-aminophenols and heterocyclic bases, and the addition salts thereof with an acid or with an alkaline agent.

[0120] Among the para-phenylenediamines that may be used, non-limiting mention may be made to para-phenylenediamine, para-tolylenediamine, 2-chloro-para-phenylenediamine, 2,3-dimethyl-para-phenylenediamine, 2,6-dimethyl-para-phenylenediamine, 2,6-diethyl-para-phenylenediamine, 2,5-dimethyl-para-phenylenediamine, N,N-dimethyl-para-phenylenediamine, N,N-diethyl-para-phenylenediamine, N,N-dipropyl-para-phenylenediamine, 4-amino-N,N-diethyl-3-methylaniline, N,N-bis(β -hydroxyethyl)-para-phenylenediamine, 4-N,N-bis(β -hydroxyethyl)amino-2-methylaniline, 4-N,N-bis(β -hydroxyethyl)amino-2-chloroaniline, 2- β -

hydroxyethyl-para-phenylenediamine, 2-fluoro-para-phenylenediamine, 2-isopropyl-para-phenylenediamine, N-(β -hydroxypropyl)-para-phenylenediamine, 2-hydroxymethyl-para-phenylenediamine, N,N-dimethyl-3-methyl-para-phenylenediamine, N-ethyl-N-(β -hydroxyethyl)-para-phenylenediamine, N-(β,γ -dihydroxypropyl)-para-phenylenediamine, N-(4'-aminophenyl)-para-phenylenediamine, N-phenyl-para-phenylenediamine, 2- β -hydroxyethyloxy-para-phenylenediamine, 2- β -acetylaminioethyloxy-para-phenylenediamine, N-(β -methoxyethyl)-para-phenylenediamine and 4'-aminophenyl-1-(3-hydroxy)pyrrolidine, and the addition salts thereof with an acid or with an alkaline agent.

[0121] Among the bis(phenyl)alkylenediamines that may be used, non-limiting mention may be made to, N,N'-bis(β -hydroxyethyl)-N,N'-bis(4'-aminophenyl)-1,3-diaminopropanol, N,N'-bis(β -hydroxyethyl)-N,N'-bis(4'-aminophenyl)ethylenediamine, N,N'-bis(4-aminophenyl)tetramethylenediamine, N,N'-bis(β -hydroxyethyl)-N,N'-bis(4-aminophenyl)tetramethylenediamine, N,N'-bis(4-methylaminophenyl)tetramethylenediamine, N,N'-bis(ethyl)-N,N'-bis(4'-amino-3'-methylphenyl)ethylenediamine and 1,8-bis(2,5-diaminophenoxy)-3,5-dioxaoctane, and the addition salts thereof with an acid or with an alkaline agent.

[0122] Among the para-aminophenols that may be used, non-limiting mention may be made to, para-aminophenol, 4-amino-3-methylphenol, 4-amino-3-fluorophenol, 4-amino-3-hydroxymethylphenol, 4-amino-2-methylphenol, 4-amino-2-hydroxymethylphenol, 4-amino-2-methoxymethylphenol, 4-amino-2-aminomethylphenol, 4-amino-2-(β -hydroxyethylaminomethyl)phenol and 4-amino-2-fluorophenol, and the addition salts thereof with an acid or with an alkaline agent.

[0123] Among the ortho-aminophenols that may be used, non-limiting mention may be made to, 2-aminophenol, 2-amino-5-methylphenol, 2-amino-6-methylphenol and 5-acetamido-2-aminophenol, and the addition salts thereof with an acid or with an alkaline agent.

[0124] Among the heterocyclic bases that may be used, non-limiting mention may be made of pyridine derivatives, pyrimidine derivatives and pyrazole derivatives, and the addition salts thereof with an acid or with an alkaline agent.

[0125] The at least one oxidation base, if present, is in an amount ranging from 0.0005% to 12% by weight of the total weight of the composition and for example, ranges from 0.005% to 6% by weight relative to the same reference.

[0126] When it is intended for oxidation dyeing of keratin fibers such as the hair, the composition may also comprise at least one coupler that may modify and/or enrich with glints the shades obtained using the disclosed fluorescent compound and the oxidation base.

[0127] The at least one coupler may be chosen from the couplers conventionally used in this field, and among which non-limiting mention may be made to, meta-phenylenediamines, meta-aminophenols, meta-diphenols, heterocyclic couplers, and the addition salts thereof with an acid or with an alkaline agent.

[0128] These couplers are, for example, chosen from 2-methyl-5-aminophenol, 5-N-(β -hydroxyethyl)amino-2-methylphenol, 3-aminophenol, 1,3-dihydroxybenzene, 1,3-dihydroxy-2-methylbenzene, 4-chloro-1,3-dihydroxybenzene, 2,4-diamino-1-(β -hydroxyethyloxy)benzene, 2-amino-4-(β -hydroxyethylamino)-1-methoxybenzene, 1,3-diaminobenzene, 1,3-bis(2,4-diaminophenoxy)propane, sesamol, α -naphthol, 6-hydroxyindole, 4-hydroxyindole, 4-hydroxy-N-methylindole, 6-hydroxyindoline, 2,6-di-

hydroxy-4-methylpyridine, 1H-3-methylpyrazol-5-one, 1-phenyl-3-methylpyrazol-5-one, 2,6-dimethylpyrazolo[1,5-b]-1,2,4-triazole, 2,6-dimethyl[3,2-c]-1,2,4-triazole and 6-methylpyrazolo[1,5-a]benzimidazole, and the addition salts thereof with an acid or with an alkaline agent.

[0129] The at least one coupler, if present, is in an amount ranging from 0.0001% to 10% by weight of the total weight of the composition and for example, from 0.005% to 5% by weight relative to the same reference.

[0130] In general, the addition salts with an acid, i.e., the oxidation bases and couplers that may be used in the compositions of the disclosure, are chosen, for example, from the hydrochlorides, hydrobromides, sulphates, citrates, succinates, tartrates, tosylates, benzenesulphonates, lactates and acetates.

[0131] The addition salts with an alkaline agent, i.e., the oxidation bases and couplers that may be used in the compositions of the disclosure are chosen, for example, from the addition salts with alkali metals and alkaline-earth metals, with ammonia and with organic amines, including alkanolamines and the compounds of formula (I).

[0132] If the composition according to the process of the invention is intended for dyeing keratin fibers, for example, the hair, the composition may include at least one oxidizing agent. The at least one oxidizing agent is chosen, for example, from hydrogen peroxide, urea peroxide, alkali metal bromates, persalts, such as, perborates and persulphates, and enzymes, such as, peroxidases and two-electron or four-electron oxidoreductases. According to one embodiment, hydrogen peroxide or enzymes are used.

[0133] The at least one oxidizing agent, if present, is in an amount ranging from 0.001 to 10% by weight relative to the weight of the ready-to-use dye composition.

[0134] The compositions employed in the process according to the disclosure may also comprise various adjuvants conventionally used in compositions of this type, such as anionic, cationic or nonionic surfactants or mixtures thereof, anionic, cationic, nonionic, amphoteric or zwitterionic polymers or mixtures thereof, mineral or organic thickeners, antioxidants, penetrating agents, sequestering agents, fragrances, buffers, dispersants, conditioners, for instance cations, cationic or amphoteric polymers, volatile or non-volatile, modified or unmodified silicones, film-forming agents, ceramides, preserving agents, stabilizers and opacifiers.

[0135] Among the thickeners that may be used, non-limiting mention may be made to, thickening systems based on associative polymers that are well known to those skilled in the art, and for example, those of the nonionic, anionic, cationic and amphoteric nature.

[0136] The at least one surfactant, if present, is in an amount ranging from 0.01% to 40% by weight relative to the weight of the composition, for example, from 0.1% to 30% by weight, relative to the weight of the composition.

[0137] Needless to say, a person skilled in the art will take care to select any of these optional additional compound(s) such that the advantageous properties intrinsically associated with the composition are not, or are not substantially, adversely affected by the envisaged addition.

[0138] The cosmetic composition employed for dyeing keratin fibers, such as the hair, may be in various forms, such as lotions, shampoos, creams, gels, pastes, or in any other suitable form.

[0139] In a further aspect of the present disclosure, the composition is in the form of a lightening dye shampoo and further comprises, in a cosmetically acceptable aqueous medium, at least one fluorescent dye as defined above, and at least one surfactant.

[0140] For example, the fluorescent compound is in a form that is soluble in the medium.

[0141] The at least one surfactant present in the shampoo may be chosen from anionic, cationic, amphoteric and non-ionic surfactants. As such, an example of nonionic surfactants that may be mentioned is alkylpolyglucosides.

[0142] In these shampoos, the at least one surfactant is present in an amount ranging from 4% to 30% and, for example, from about 8% to 20% by weight, relative to the total weight of the shampoo composition.

[0143] According to another aspect of the present disclosure, a process comprises applying a composition to keratin fibers, for example, to the hair, with the aim of producing a temporary or transient coloration with a lightening effect on these keratin fibers, which can be removed at the first shampoo wash or by using a makeup remover. This composition, for example, comprises at least one fluorescent dye. According to this aspect, the fluorescent dye is in a form that is insoluble in the medium of the composition.

[0144] As provided above, besides the fluorescent dye, the composition may further comprise at least one non-fluorescent pigment. These non-fluorescent pigments are usually chosen from cosmetically and/or dermatologically acceptable organic or mineral pigments.

[0145] These disclosed dyes may be in the form of a powder or a pigmentary paste. Reference may be made, for example, to patent application EP 808 150 as regards the list of pigments that may be used.

[0146] The non-fluorescent pigments, if present in the composition, are added in an amount such that they do not mask the fluorescence effect provided by the disclosed fluorescent dye.

[0147] For purely indicative purposes, the non-fluorescent pigment, if present, is in an amount ranging from 0.01% to 10% by weight relative to the weight of the composition and, for example, from 0.05% to 3% by weight, relative to the same reference.

[0148] The pH of the compositions used in the context of this aspect of the disclosure ranges from 6 to 8 and for example, from 6 to 7.5.

[0149] Such compositions may further comprise at least one film-forming polymer, which may be in a form that is soluble or dispersed in the cosmetically acceptable medium of the composition.

[0150] In order to improve, as desired, the properties of the film formed, the composition may also comprise at least one plasticizer.

[0151] These compositions may further comprise various adjuvants. These adjuvants may be chosen from, for instance, insoluble or soluble, volatile or non-volatile silicones; quaternized or non-quaternized proteins; sunscreens; surfactants; antifoams; moisturizers; humectants; emollients; plant oils or synthetic oils; preserving agents or sequestering agents; antioxidants; fragrances; acidifying or basifying agents; pigment-suspending agents; and thickeners.

[0152] The compositions used in this aspect of the present disclosure may be in various forms, such as more or less thickened liquids, creams or gels.

[0153] For example, the disclosed composition may be in the form of mascara for the eyelashes or hair mascara, to be applied especially with a brush or a comb.

[0154] According to yet another aspect of the present disclosure, a process for coloring or lightening the skin comprises applying to the skin a composition comprising at least one fluorescent dye described herein.

[0155] According to this aspect, the at least the fluorescent dye may be in a form that is insoluble in the medium of the composition. The composition may comprise a fatty phase, a fraction of which is not volatile, i.e., it does not evaporate at a temperature ranging from 15° to 25°C. This fatty phase may constitute the continuous phase or the dispersed phase of the composition.

[0156] This non-volatile fraction may be chosen from non-volatile oils, waxes, gums, resins and/or pasty fatty substances of animal, plant, mineral or synthetic origin.

[0157] For example, the non-volatile fraction, if present, is in an amount ranging from 1% to 85% and for example, from 1% to 30% by weight, relative to the total weight of the composition.

[0158] The compositions according to this aspect of the disclosure may also comprise at least one “soft-focus” filler. The term “filler” should be understood as meaning colorless or white, mineral or synthetic, lamellar or non-lamellar particles intended to give body or rigidity to the composition, and/or softness, a matt effect and uniformity to the makeup result. Moreover, a “soft-focus” filler is a filler that furthermore gives transparency to the complexion and a hazy effect. This soft-focus effect is associated with the spectral reflectance of the filler.

[0159] The at least one “soft-focus” filler thus may be chosen from silica, for example, the silica microbeads SB-700 or SB-150 from Miyoshi; talc, for example, Talc P3 from Nippon Talc; silica/TiO₂ or silica/zinc oxide composites; polyethylene powder; starch powder; nylon powder, for example Orgasol 2002 Extra D Nat Cos from Atochem; and styrene/acrylic copolymer powders.

[0160] For example, these fillers may have a mean particle size of less than or equal to 15 μm and, for instance, less than or equal to 3 μm . For further example, these fillers are non-spherical.

[0161] As such, if the at least one filler is present, the filler is in an amount ranging from 0.1% to 20% and, for example, from 8% to 15% by weight, relative to the total weight of the composition.

[0162] The composition according to this aspect may further comprise additives that are conventional in the field. For instance, these additives may be chosen from hydrophilic or lipophilic organic UV-screening agents and mineral screening agents. If present, the additive is present in an amount ranging from 0.1% to 20% by weight, relative to the weight of the composition.

[0163] Moreover, at least one moisturizer may be present in this aspect of the disclosed composition. For example, the at least one moisturizer may be chosen from urea or its derivatives; polyols, for instance glycerol or sorbitol; and lipid vesicles emulsified, for example, using a nonionic surfactant in the composition, for instance proteins, tocopherols, amino acids, and allantoin.

[0164] The pH of composition according to this aspect of the disclosure ranges from 6.5 to 7.5. For example, the composition may be in the form of a cream, a gel or a milk. For further example, the composition may be a foundation.

[0165] As mentioned previously, the compositions used in the context of these aspects and for which the nature of the constituents and their proportions have just been described, are intended to be applied to keratin materials.

[0166] In accordance with another aspect of the present disclosure, the composition is applied without rinsing and the medium is then evaporated or left to

evaporate. This method is suitable in the case where the keratin material is the skin or if the composition is intended to be applied to keratin fibers in order to temporarily dye them.

[0167] According to a further aspect of the present disclosure, a process comprises:

- a) applying the disclosed composition to the keratin materials for a time that is sufficient to develop the desired coloration and lightening,
- b) rinsing the keratin materials,
- c) optionally washing and rinsing the keratin materials, and
- d) drying the said keratin materials.

[0168] This process may be suitable when the treated keratin materials are fibers such as the hair, the moustache, the beard or the eyebrows.

[0169] The composition with which the fibers treated in step c) are optionally washed may be, for example, a shampoo.

[0170] The time required to develop the coloration and to obtain the lightening effect on the keratin fibers ranges from 5 to 60 minutes and, for example, from 5 to 40 minutes.

[0171] In addition, the temperature desired to develop the coloration and to obtain the lightening effect on the keratin fibers ranges from room temperature, i.e., ranging from 15° to 25°C, to 80°C and, for example, from 15° to 40°C.

[0172] In the case of direct dyeing or oxidation dyeing, the process according to the disclosure comprises at least separately storing, a first composition comprising, in a medium that is suitable for dyeing, at least one fluorescent dye and optionally at least one of a direct dye, an oxidation base, and a coupler, and a second composition containing, in a medium that is suitable for dyeing, at least one oxidizing agent; and then in mixing them

together at the time of use, followed by applying this mixture to the keratin fibers for a time that is sufficient to develop the desired coloration and lightening, after which the keratin fibers are rinsed; the said keratin fibers are optionally washed with a cleansing composition and are rinsed; and the keratin fibers are then dried or are left to dry.

[0173] Another aspect of the present disclosure is at least one fluorescent or non-fluorescent compound corresponding to the formula disclosed herein, wherein:

[0174] R_1 and R_2 , which may be identical or different, are chosen from:

- hydrogen atoms;
- linear and branched alkyl radicals comprising 1 to 10 carbon atoms and for example, from 1 to 4 carbon atoms, which may optionally be interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and optionally be substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;
- aryl and arylalkyl radicals, wherein the aryl groups comprise 6 carbon atoms and the alkyl groups comprising 1 to 4 carbon atoms; and further wherein the aryl groups may optionally be substituted with at least one radical chosen from linear and branched alkyl radicals comprising 1 to 4 carbon atoms, which may be optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;
- R_1 and R_2 may optionally be linked so as to form a heterocycle with the nitrogen atom to which they are attached and may further comprise at least

one other hetero atom, wherein the heterocycle may be optionally substituted with at least one linear or branched alkyl radical, for example, comprising 1 to 4 carbon atoms and optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and/or optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;

- R_1 or R_2 may also optionally be engaged in a heterocycle comprising the nitrogen atom to which they are attached and one of the carbon atoms of the phenyl group bearing the nitrogen atom;

[0175] R_3 and R_4 , which may be identical or different, are chosen from hydrogen atoms and alkyl radicals comprising 1 to 4 carbon atoms;

[0176] R_5 , which may be identical or different, is chosen from hydrogen atoms, halogen atoms or linear and branched alkyl radicals comprising 1 to 4 carbon atoms, optionally interrupted with at least one hetero atom;

[0177] R_6 , which may be identical or different, is chosen from hydrogen atoms; halogen atoms; linear or branched alkyl radicals comprising 1 to 4 carbon atoms, optionally substituted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom and/or optionally interrupted with at least one entity chosen from hetero atoms, groups comprising at least one hetero atom, and halogen atoms;

[0178] X is chosen from:

- linear and branched alkyl radicals comprising 1 to 14 carbon atoms and alkenyl radicals comprising 2 to 14 carbon atoms, which may be optionally interrupted with at least one entity chosen from hetero atoms and groups substituted with at least one hetero atom and/or optionally substituted with at

least one entity chosen from hetero atoms, groups containing at least one hetero atom, and halogen atoms;

- 5- and 6-membered heterocyclic radicals optionally substituted with at least one entity chosen from

linear and branched alkyl radicals comprising 1 to 14 carbon atoms, optionally substituted with at least one hetero atom;

linear and branched aminoalkyl radicals comprising 1 to 4 carbon atoms, optionally substituted with at least one hetero atom; and

halogen atoms;

- fused and non-fused aromatic and diaromatic radicals, optionally separated with an alkyl radical comprising 1 to 4 carbon atoms, wherein the aromatic and diaromatic radicals may optionally be substituted with at least one entity chosen from halogen atoms and from alkyl radicals comprising 1 to 10 carbon atoms optionally substituted and/or interrupted with at least one entity chosen from hetero atoms and groups bearing at least one hetero atom
- dicarbonyl radicals;
- the group X optionally comprises at least one cationic charge;

[0179] a is equal to 0 or 1;

[0180] Y⁻, which may be identical or different, is chosen from organic and mineral anions; and

[0181] n is an integer ranging from 2 to the number of cationic charges present in the fluorescent dye;

[0182] with the exception of the compounds for which:

- X is chosen from unsubstituted linear alkyl radicals comprising 1 or 4 carbon

atoms wherein a is equal to 1 or a is equal to 0; and R_1 and R_2 simultaneously comprise methyl radicals; R_5 and R_6 comprise hydrogen atoms; R_3 and R_4 , which are identical, comprise hydrogen atoms;

- X is chosen from ethyl, linear and branched unsubstituted C_3 alkyl radicals; a is equal to 1; R_3 and R_4 , which are identical, are hydrogen atoms; R_5 is a hydrogen atom; R_1 and R_2 :
 - are identical, and are chosen from methyl radicals, and R_6 is chosen from hydrogen atoms and methyl radicals in an ortho position relative to the carbon atom of the benzene ring bearing the carbon-carbon unsaturated bond;
 - and are identical, comprise ethyl radicals,
 - and R_6 is chosen from hydrogen atoms and methoxy radicals in an ortho position relative to the carbon atom of the benzene ring bearing the carbon-carbon unsaturated bond; or
 - are different, and are chosen from ethyl radicals and ethyl radicals substituted with an entity chosen from dimethylamino, trimethylammonium and benzyldimethylammonium groups;
- X is chosen from phenyl radicals linked to the groups CR_3R_4 via bonds in the 1,4 position relative to each other; R_3 and R_4 , which are identical, comprise hydrogen atoms; a is equal to 1; R_5 comprises a hydrogen atom; R_1 and R_2 :
 - are identical, and are methyl radicals, and R_6 is chosen from hydrogen atoms and methyl radicals in an ortho position relative to the carbon atom of the benzene ring bearing the carbon-carbon unsaturated bond;
 - are identical, comprise ethyl radicals,

and R_6 is chosen from hydrogen atoms or methoxy radicals in an ortho position relative to the carbon atom of the benzene ring bearing the carbon-carbon unsaturated bond; or

- are different, and are chosen from ethyl radicals and ethyl radicals substituted with an entity chosen from dimethylamino, trimethylammonium and benzyldimethylammonium groups;

[0183] According to another aspect of the present disclosure, the compounds that are excluded are those wherein:

- X may be chosen from linear alkyl radicals comprising 1 carbon atom wherein a is equal to 1 or a is equal to 0; and R_1 and R_2 are chosen from methyl radicals; R_5 and R_6 are chosen from hydrogen atoms;
- X is chosen from linear and branched C_2 - C_3 alkyl radicals; a is equal to 1; R_1 and R_2 , which are identical, are chosen from methyl radicals and ethyl radicals, or are different, and may be chosen from ethyl radicals and ethyl radicals substituted with an entity chosen from dimethylamino, trimethylammonium and benzyldimethylammonium groups; R_5 is chosen from a hydrogen atom; R_6 may be chosen from hydrogen atoms and methyl and methoxy radicals; and
- X may be chosen from phenyl radicals linked to the groups CR_3R_4 via bonds in position 1, 4 relative to each other; a is equal to 1; R_1 and R_2 , which are identical, are chosen from methyl radicals and ethyl radicals, and are different, and may be chosen from ethyl radicals and ethyl radicals substituted with an entity chosen from dimethylamino, trimethylammonium or benzyldimethylammonium groups; R_5 is chosen from a hydrogen atom; R_6

may be chosen from hydrogen atoms and methyl and methoxy radicals in an ortho position relative to the carbon-carbon unsaturated bond.

For example, X may be chosen from:

- branched alkyl radicals comprising 4 to 14 carbon atoms; linear and branched alkyl radicals comprising 1 to 14 carbon atoms, substituted with at least one entity chosen from halogen atoms, hetero atoms, and groups bearing at least one hetero atom; linear and branched alkyl radicals comprising 1 to 14 carbon atoms interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom; linear and branched alkene radicals comprising 2 to 14 carbon atoms, optionally interrupted with at least one entity chosen from hetero atoms and groups comprising at least one hetero atom and optionally substituted with at least one entity chosen from hetero atoms and groups bearing at least one hetero atom;
- dicarbonyl radicals;
- 5- and 6-membered heterocyclic radicals optionally substituted with at least one entity chosen from
 - linear and branched alkyl radicals comprising 1 to 14 carbon atoms, optionally substituted with at least one hetero atom;
 - linear and branched aminoalkyl radicals, comprising 1 to 4 carbon atoms, optionally substituted with at least one hetero atom; and
 - halogen atoms;
- C₆ aromatic radicals linked to the groups CR₃R₄ via linear or branched C₁-C₄ alkyl radicals, which may be identical or different, and comprising a group comprising at least one hetero atom which is optionally directly linked to the

aromatic radical, in position 1,3 relative to each other, wherein the C₆ aromatic radicals are optionally substituted with at least one entity chosen from halogen atom and C₁-C₄ alkyl radicals; the ; C₆ aromatic radicals linked to the groups CR₃R₄ via linear or branched C₁-C₄ alkyl radicals in position 1,2 relative to each other, which may be identical or different, and comprising a group comprising at least one hetero atom which is optionally directly linked to the aromatic radical; C₆ aromatic radicals linked to the groups CR₃R₄ via bonds in position 1,2 relative to each other, substituted with at least one group comprising at least one hetero atom; C₆ aromatic radicals linked to the groups CR₃R₄ via linear branched C₁-C₄ alkyl radicals, which may be identical or different, and containing a group comprising at least one hetero atom which may optionally be directly linked to the aromatic radical in position 1,4 relative to each other; and diphenyl radicals linked to the groups CR₃R₄ via bonds in position 4,4' relative to each other, the two aromatic rings optionally being linked by means of a linear or branched C₁-C₄ alkyl radical; and

- the group X optionally bearing at least one cationic charge.

For further example, X may be chosen from:

- branched alkyl radicals comprising 4 to 13 carbon atoms; linear and branched alkyl radicals comprising 1 to 13 carbon atoms, substituted with at least one entity chosen from chlorine atoms, hydroxyl radicals, acetoxy radicals, amino radicals, and ammonium radicals; linear and branched alkyl radicals comprising 2 to 12 carbon atoms interrupted with at least one entity chosen from oxygen atoms, and nitrogen atoms comprising one or two radicals, which may be identical or different, chosen, independently of each other, from

hydrogen atoms, linear and branched C₁-C₄ alkyl radicals optionally comprising a hydroxyl group; and linear and branched alkene radicals comprising 2 to 12 carbon atoms, and comprising an unsaturated carbon-carbon bond;

- imidazole radicals optionally substituted with at least one C₁-C₁₄ alkyl radical;
- C₆ aromatic radicals linked to the groups CR₃R₄ via linear or branched C₁-C₄ alkyl radicals, which may be identical or different, and containing a group comprising at least one hetero atom which may optionally directly linked to the aromatic radical in position 1,3 relative to each other wherein the C₆ aromatic radicals are optionally substituted with at least one entity chosen from fluorine atoms and methyl; C₆ aromatic radicals linked to the groups CR₃R₄ via the linear or branched C₁-C₄ alkyl radicals, which may be identical or different, and containing an amide group directly linked to the aromatic radical in position 1, 4 relative to each other; and
- the group X optionally comprising at least one cationic charge.

In accordance with yet another aspect of the disclosure, X may be chosen

from:

- branched alkyl radicals comprising 4 to 13 carbon atoms; linear and branched alkyl radicals comprising 1 to 13 carbon atoms, substituted with at least one entity chosen from chlorine atoms, hydroxyl radicals, acetoxy radicals, amino radicals, and ammonium radicals; linear and branched alkyl radicals comprising 2 to 12 carbon atoms interrupted with at least one entity chosen from oxygen atoms, nitrogen atoms comprising at least one entity, which may be identical or different, chosen, independently of each other, from hydrogen

atoms, and linear and branched C₁-C₄ alkyl radicals optionally comprising a hydroxyl group; and linear and branched alkene radicals comprising 2 to 12 carbon atoms, and comprising an unsaturated carbon-carbon bond;

- pyridine radicals linked to the groups CR₃R₄ via bonds in positions 2 and 6 relative to each other;
- imidazole radicals optionally substituted with at least one C₁-C₁₄ alkyl radical;
- C₆ aromatic radicals linked to the groups CR₃R₄ via linear or branched C₁-C₄ alkyl radicals, which may be identical or different, and containing a group comprising at least one hetero atom which may optionally directly linked to the aromatic radical in position 1,3 relative to each other wherein the C₆ aromatic radicals are optionally substituted with at least one entity chosen from fluorine atoms and methyl; C₆ aromatic radicals linked to the groups CR₃R₄ via the linear or branched C₁-C₄ alkyl radicals, which may be identical or different, and containing an amide group directly linked to the aromatic radical in position 1, 4 relative to each other; and
- the group X optionally comprising at least one cationic charge.

[0184] A further aspect of the present disclosure is a composition comprising, in a cosmetically acceptable medium, at least one fluorescent dye as provided above.

[0185] For example, the at least one fluorescent dye is present in an amount ranging from 0.01% to 20% by weight, for example, from 0.05% to 10% by weight and as such can be from 0.1% to 5% by weight, relative to the total weight of the composition.

[0186] The amount of the at least one fluorescent dye present in the composition is, such that, after application to the keratin material, such as, keratin fibers with a tone height of not more than 6, for example, not more than 4, the composition gives a reflectance,

ranging from 500 to 700 nm, which may be greater than the reflectance of the untreated keratin material.

[0187] For example, the fluorescent compound is chosen from compounds having solubilities in the medium of the composition of at least 0.01 g/l, for example, at least 0.5 g/l, further for example, at least 1 g/l, and still further, at least 5 g/l, at a temperature ranging from 15° to 25°C.

[0188] The cosmetic composition used to dye keratin fibers may be in various forms, such as lotions, shampoos, creams, gels, pastes or any other suitable form.

[0189] According to one aspect of the present disclosure, the composition is in the form of a lightening dye shampoo comprising, in a cosmetically acceptable aqueous medium, at least one fluorescent compound according to the disclosure and at least one surfactant. The at least one surfactant present in the shampoo may be chosen from anionic, cationic, amphoteric and non-ionic surfactants.

[0190] As such, the at least one surfactant may, for example, be chosen from nonionic surfactants comprising alkylpolyglucosides.

[0191] In these shampoos, the surfactants are present in an amount ranging from 4% to 30% and, for example, ranging from 8% to 20% by weight, relative to the total weight of the shampoo composition.

[0192] Another aspect of the present disclosure is a multi-compartment kit comprising at least one compartment containing at least one composition comprising at least one fluorescent dye and optionally at least one entity chosen from additional fluorescent dyes, non-fluorescent direct dyes, oxidation bases, and couplers, in a cosmetically acceptable medium, and at least one other compartment containing a composition comprising at least one oxidizing agent. According to another embodiment of

the kit of the disclosure, the composition comprises at least one fluorescent compound that is soluble in the medium.

[0193] The multi-compartment kit may be equipped with a means for applying the desired mixture to the hair, such as the devices described in FR 2 586 913.

[0194] Other than in the examples, or where otherwise indicated, all numbers expressing quantities of ingredients, reaction conditions, and so forth used in the specification and claims are to be understood as being modified in all instances by the term “about.” Accordingly, unless indicated to the contrary, the numerical parameters set forth in the following specification and attached claims are approximations that may vary depending upon the desired properties sought to be obtained herein. At the very least, and not as an attempt to limit the application of the doctrine of equivalents to the scope of the claims, each numerical parameter should be construed in light of the number of significant digits and ordinary rounding approaches.

[0195] Notwithstanding that the numerical ranges and parameters setting forth the broad scope are approximations, the numerical values set forth in the specific examples are reported as precisely as possible. Any numerical value, however, inherently contain certain errors necessarily resulting from the standard deviation found in their respective testing measurements. The following examples are intended to illustrate the invention without limiting the scope as a result.

EXAMPLES

Fluorescent compound

[0196] 93 g of 2-picoline were reacted with 120 g of 1,6-dibromohexane in dimethylformamide at 110°C for 5 hours.

[0197] The precipitated product was recovered and filtered off.

[0198] 109 g of the product obtained above were dissolved in methanol and 82.82 g of p-dimethylaminobenzaldehyde were added in two portions, in the presence of pyrrolidine.

[0199] The mixture was then left for 30 minutes.

[0200] The product was recovered in precipitated form.

[0201] Analysis by mass spectroscopy: 266.

[0202] Elemental analysis: C: 62.43%; H: 6.40%; Br: 23.07%; N: 8.09%.

[0203] The formula was as follows: C₃₆H₄₄N₄·2Br.

Coloration on the hair

[0204] The compound was dissolved in deionized water and the pH was adjusted to 7.1 with dilute hydrochloric acid. The concentration of the compound in the medium was 1% by weight.

[0205] The dye solution thus obtained was applied to natural hair (90% white hairs) and chestnut-brown hair (tone height 4) with a bath ratio of 5:1, for 20 minutes at room temperature.

[0206] After dyeing, the hair was rinsed with water and dried at room temperature.

Shampooing procedures

[0207] 0.4 g of Ultra Doux Camomile shampoo (Gamier) per gram of hair was applied to the predyed locks, according to the following protocol:

[0208] each lock passed 3 times between the fingers and then passed 15 times under warm water and dried for 30 minutes. Two and six shampooing cycles were performed.

Test results

[0209] The color measurements were taken using a spectrophotometer (Minolta CM3600d, specular components included, illuminant D65, 10° angle).

Color uptake on natural hair (90% of natural white hairs):

	L*	a*	b*
Undyed natural hair	57.02	0.71	13.29
Dyed natural hair	47.05	28.12	42.62

[0210] It was found that the dye is satisfactorily taken up into the hair.

Color uptake on chestnut-brown hair:

	L*	a*	b*
Undyed chestnut-brown hair	23.00	3.29	4.44
Dyed chestnut-brown hair	23.66	4.78	5.53

[0211] It was found that the dye is satisfactorily taken up into the hair.

Lightening power on natural chestnut-brown hair

[0212] In Figure 1, the simple line curve shows the reflectance obtained for the undyed chestnut-brown hair (control) and the curve marked with triangles shows the reflectance obtained for chestnut-brown hair treated in accordance with the invention.

[0213] It is found that there is a lightening effect on the hair treated according to the disclosure, compared with the undyed hair.
